

A photograph of three students sitting at a long wooden table in a library or study hall. The student on the left is a woman with curly hair, looking at a laptop. The student in the middle is a man with short hair, looking down at a notebook. The student on the right is a woman with long hair and glasses, looking at a notebook. The background shows bookshelves and a staircase. The image has a dark, muted color palette.

Whitepaper

# Technology is supposed to help you teach and learn

## Is Technology An Ally or Enemy?

Technology isn't here to replace teachers, it is here to complement them and enhance the service they offer. From stone tablets, to pen & paper, blackboards and now the internet, education has always benefitted from the latest technology. The internet puts virtually all information known to humanity at our fingertips, so which teacher wouldn't fully embrace such a marvelous gift?

Well, many have concerns about how the internet has so fully saturated the lives of kids in the average classroom. Some educators feel the need to restrict web access outside of scholastic projects in order prevent distractions, cyber-bullying and other threats. On a different tack, some teachers feel they are in a race against the machine, and could be replaced entirely by the internet. 100% online degrees by remote learning don't provide any reassurance on this front. Most teachers stress that tutor-student and student-student interactions are an invaluable part of a rounded education. However, when the internet is used correctly, it supports both educators and students. It accelerates learning times, provides flexibility, and allows teachers to organize lessons to a degree unmatched in our history.

From stone tablets, to pen & paper, blackboards and now the internet, education has always benefitted from the latest technology.

Take Chromebooks, for instance, whose ubiquity in the classroom has greatly helped schools. The Chromebook program has put cutting edge technology in the hands of every student, even those from the most underprivileged sections of society. However, many educators argue that those devices also lead students to distraction and misconduct when usage is not supervised. Should this lead to the removal of Chromebooks, the banning of the internet, both? Of course not, but school leaders need a technology they can use. One that becomes a true teaching aid while offering central management to regulate harmful or frivolous activity.

## Online Safety for Students, Staff, and Schools

Nu EDU SEC is a standards-compliant platform that lets K-12 schools and other educators centrally manage Chromebooks, enforce security policy, monitor usage, and protect students.

Achieve CIPA, COPPA, and FERPA compliance

Integrates with G Suite and Active Directory

Supports Chromebooks, Windows and macOS devices

Centrally manage an entire campus network in minutes

Identify signs of self-harm and cyberbullying

Location finder lets you easily track down missing devices

Implement strong web-search and content filters

Get real-time reports and implement parental controls

Find out more at <https://www.nuedusec.com/>

# Are you a school leader or IT admin? Help your district become secured.

Nu EDU SEC is the complete package to keep your school campus safe. Ideally suited for K-12 institutions, Nu EDU SEC lets you achieve compliance with government standards and can be deployed to your entire device fleet in minutes.
